

Class SparseArray

List

name: sparse_array description: constructor

name: insert_at description: allow copy

name: emplace_at description: acces index from the list

name:
erase
description:
erase a value at the index
of a list

name: get_index description: get index from a value

name:

display description: display a list addons: you may overide some operator two print what ever you want

SparseArray=Vector

name: size description: size = vector::size

name: begin description:

begin = vector::begin

name: cbegin description:

cbegin = vector::cbegin

name: end description: end = vector::end

name: cend description: cend = vector::cend
